------	--------	---------	--------------	--------------------

**ilmasil® PO-1** is an electrically fused, opaque quartz, manufactured by fusing high purity quartz sand using QSIL's proprietary plasma melting process. The opacity is achieved by controlled distribution of fine microbubbles (typical diameter 10 – 150 µm). There are no chemical additives used to achieve opacity.

**Application:** This specification is applicable to all products produced with **ilmasil® PO-1**

## 1 Optical Properties

### 1.1 Typical Transmission

**Comment:** transmission measured on a plane surface

**Limit:** < 1% for thickness 3 mm within the wavelength range of 190...8000 nm.
